

Joe Rogan's Bombshell Interview with Dr. Robert Malone on COVID-19, 'Mass Formation Psychosis'

On a controversial episode of the "[Joe Rogan Experience](#)," quickly banned on YouTube, Dr. Robert Malone, Medical Director of The Unity Project, President of the Global COVID Summit and inventor of mRNA vaccine technology, suggested the U.S. is in the midst of a "mass formation psychosis" over COVID-19.

"Our government is out of control on this," Malone, who was banned from Twitter over the weekend said [in an interview](#) with Rogan. "And they are lawless. They completely disregard bioethics. They completely disregard the federal common rule. They have broken all the rules that I know of, that I've been trained [in] for years and years and years."

"These mandates ... are explicitly illegal" and "are explicitly inconsistent with [the Nuremberg Code](#)," Malone said, referring to the most important document in the history of medical research ethics on human experimentation. And "they are

explicitly inconsistent with the [Belmont report](#),” Malone added, referring to the 1978 report published in the Federal Register on ethical principles and guidelines for research involving human subjects.

“They are flat out illegal,” Malone said, “and they don’t care.”

Malone said Americans are in the midst of what he called “mass formation psychosis,” drawing parallels to the mentality developed among the German population in the 1920s and 1930s. In those years, the Germans “had a highly intelligent, highly educated population, and they went barking mad. And how did that happen?” Malone asked.

“When you have a society that has become decoupled from each other and has free-floating anxiety in a sense that things don’t make sense, we can’t understand it,” Malone continued. “And then their attention gets focused by a leader or series of events on one small point just like hypnosis. They literally become hypnotized and can be led anywhere.”

“They will follow that person. It doesn’t matter if they lie to them or whatever,” he said. People aren’t connected socially anymore, except through social media, and “then this thing happened,” Malone said referring to the pandemic. “That is how mass formation psychosis happens and that is what has happened here.”

Informed consent ‘is not happening’

Malone told Rogan his position is one that revolves around freedom of choice and [informed consent](#).

“My position is that people should have the freedom of choice, particularly for their children, and that in order to appropriately choose to participate in a medical experiment, they have to be properly informed of the risks, as well as the

benefits,” Malone said. “And so I’ve tried really hard to make sure people have access to the information about those risks and potential benefits – true unfiltered academic papers and raw data, etc.”

“The policy that’s being implemented is one in which no discussion of the risks is allowed because, by definition, they would illicit vaccine hesitancy,” and “informed consent is not only not happening, it’s actively being blocked,” he said.

The [podcast](#), which is three hours long, goes into detail on the suppression of therapeutic drugs like ivermectin and hydroxychloroquine, the alliance formed between big tech and the mainstream media to suppress COVID information, the corrupt Pfizer clinical trials and financial incentives for hospitals to hospitalize people for COVID, put them on vents and attribute deaths to the virus.

“What we’re experiencing is a coordinated media warfare, the level of which we’ve never seen before and I and my peers who are experienced in multiple outbreaks have never seen this level of coordinated propaganda,” Malone said.

Malone, who said he has had COVID twice, received two doses of Moderna shortly after it was authorized because there was a rumor at the time that the COVID vaccine could help those with long COVID – which has since been disproven.

With the second dose, Malone said he developed stage three hypertension with systolic blood pressure up to 230, postural orthostatic tachycardia syndrome, irregular heartbeat and narcolepsy. “I’m lucky to be alive,” he said, noting that people who have natural immunity from having COVID are at a higher risk of experiencing vaccine adverse events.
